EXTERNAL LABOR APPLICANTS PORTFOLIO

IMS

Overview

A locally run system that helps labor externalization companies manage their candidates' activities-data and smoothen communication and information sharing. The system has a light android app that works alongside it and they both require no internet to operate. It simplifies data report generation by automating calculated fields like age and has provision to export any system list into **Excel** where further analytical decisions can be made from.

How the system works

Computer Side

- A registered user logs into the system
- Registers candidates' data from files attaching scanned photos and passport copies for the candidate.
- For any activity, user creates an activity and selects type of activity e.g (Vetting) and fills in detail such as (client name) for reference.
- User selects list/activity of interest and attaches candidates by a live search provided via the list page.
- Once list/activity is ready, one can export it to excel for further use such as emailing and printing.
- Key activities are summarized at the dashboard for quick reference
- Once an activity link is clicked from the dashboard, all lists are combined into one showing candidates who ever attended that activity from all dates. This is further exported to Excel for any analytical decisions to be made.

- For quick reference of a specific candidate, the system has a quick search option via its menu.
- **The App Side**
- The app is installed onto one's smart phone.
- One then opens the app
- It presents the search screen where one types in the name of the candidate he/she wants to view detail about.
- List containing candidates who match the search is displayed.
- This is where candidates with similar names can be distinguished from and handled with close attention.
- One clicks on any of interest and detail about that candidate is displayed.
- If one clicks the phone number on the display, the phone makes an automatic call to that candidate. Same applies if one clicks the phone number of next of kin.
- If one long-presses on the photos e.g passport number, full photo or small photo, the app offers the option to share on WhatsApp or any other medium available for quick information exchange. This helps especially if client would want to select a candidate but preferred to look at full photo first or passport copy.

Strengths

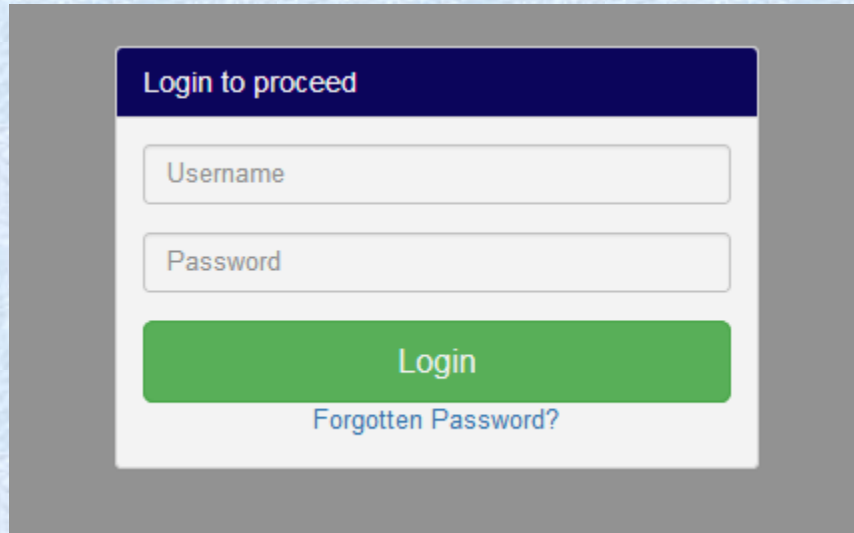

- The system cannot allow repetition of candidates in the same activity
- Once correction is made to a candidate's detail due to earlier typing error, the effect is taken to every activity the candidate appears.

Free Customizations

- For a company that has several users in the different process stages, login access can be modified accordingly to limit permissions.

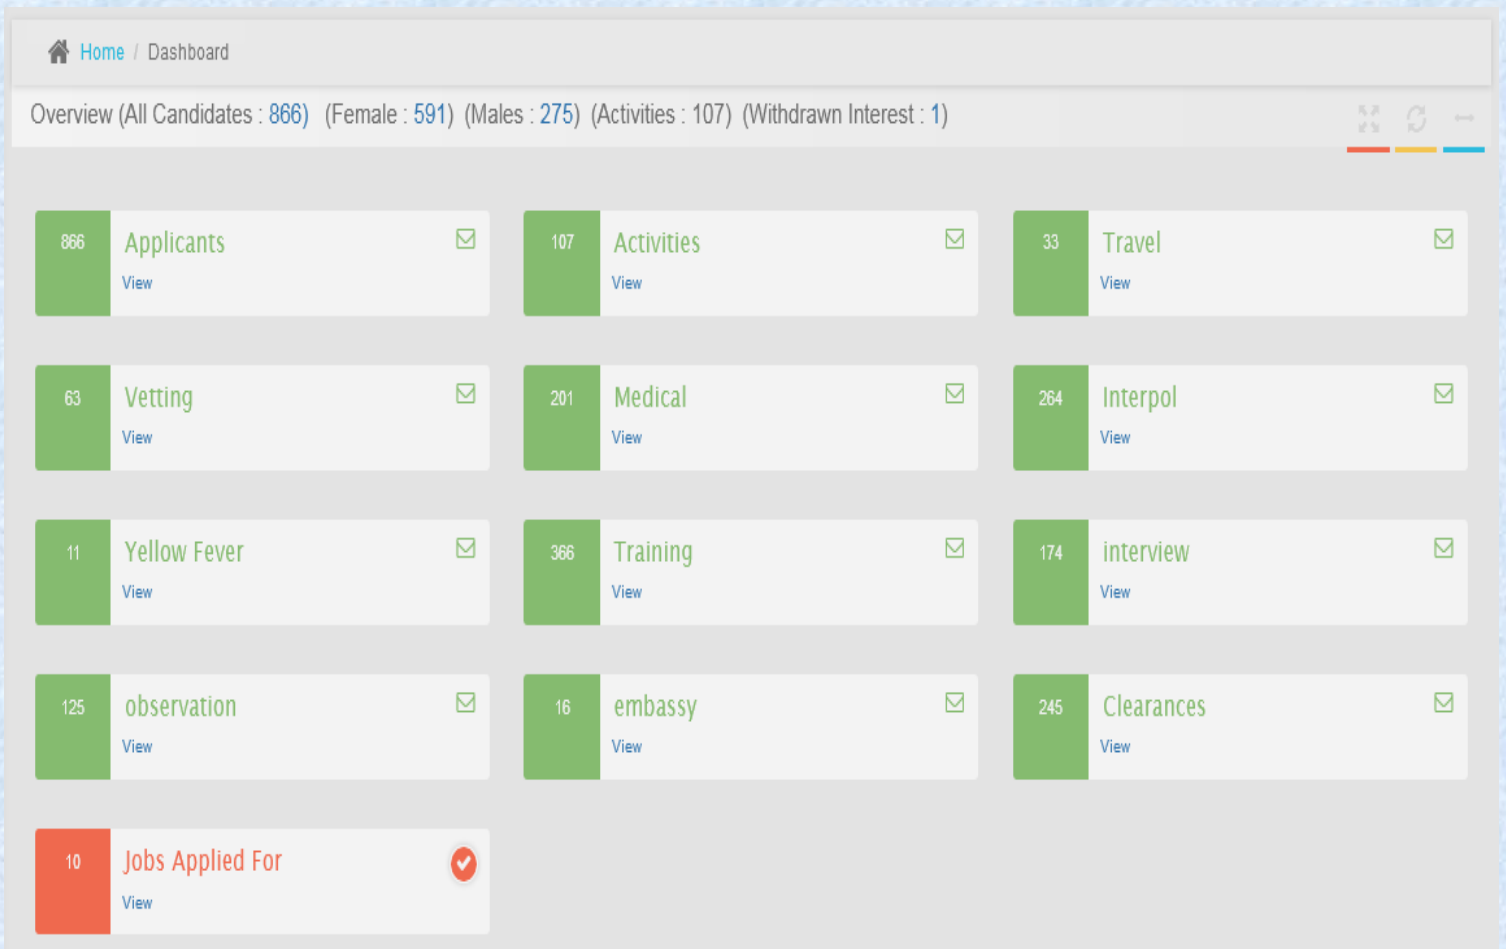

Key Screenshots

Login

A login form with a dark blue header containing the text "Login to proceed". Below the header are two input fields: "Username" and "Password". A green button labeled "Login" is positioned below the input fields. Underneath the button is a blue link that says "Forgotten Password?".

CUSTOMISATION

This software is being used, sold and priced as is with the outlined functionalities above.

In the event that you need further customization, your request shall be addressed and necessary preliminary deliverables will be submitted to you within a period of 48hrs. These include updated concept document and related communicable requirements as shall be found necessary. This applies to major adjustments that make an effect to the prevailing system functionality.
